

	2025	2024
Gross Margin %	0.69	0.70
Operating Margin %	0.46	0.45
Net Profit Margin %	0.36	0.36
Free Cash Flow (M\$)	71,611	74,071
Current Ratio	1.35	1.27

Gross Margin % (0.69 vs 0.70): The core cost to deliver products and services increased just a tiny bit compared to overall sales, causing a very minor dip in initial profitability.

Operating Margin % (0.46 vs 0.45): Despite the slightly lower gross margin, the company actually improved its everyday efficiency. It successfully kept operating expenses (like R&D and admin) under control to squeeze out a higher operating profit.

Net Profit Margin % (0.36 vs 0.36): The final bottom-line profitability stayed exactly the same, showing highly consistent and stable financial performance year over year.

Free Cash Flow (\$71,611 vs \$74,071): Total cash generation dropped slightly. This wasn't from weak operations, but rather because the business aggressively spent cash on new property and equipment to fund future growth.

Current Ratio (1.35 vs 1.27): Short-term financial safety improved. The company built up a larger cushion of liquid assets, meaning it is in a stronger position to easily pay off its immediate debts.
